MythBusting1 pilot study

This pilot study seeks to clarify the “EPM” syndrome associated with vaccinations.

Enrollment criteria:

- The vaccine must be administered by a veterinarian.
- Your veterinarian must suspect EPM post-vaccination.

What we need to enroll your horse:

- A serum sample.
- A submission form (on the testing tab) signed by your veterinarian
- A completed Polyneuritis Equi score form (on the testing tab)

What you will get:

- An evaluation of the C-reactive protein
- An evaluation of anti-myelin protein antibodies

What your veterinarian will get:

- Consultation on the pathogenesis of the post-vaccination EPM syndrome
- Recommended treatment approach

Our research is data driven

In this study, we ask the horse “What
was your immune reaction to the
vaccine?”
